

RadioJOVE

Citizen science in scientific research using the VO

B. Cecconi, R. Savalle, P. Le Sidaner
and the RadioJOVE + VESPA teams

RadioJOVE

- **RadioJOVE** is an EPO project developed in the USA: <http://radiojove.org>
 - **Goal:** introducing low frequency radioastronomy concepts to students, teachers, amateur radio community and the general public.
 - **The participants are building their own radio telescope**, using a kit sold by the Radio JOVE team. This instrument can observe the sky at frequencies around **20 - 30 MHz**.
 - The users can share their observations on an archive web site, and on a mailing list.
 - About 2000 kits have been shipped to date, all over the world.
- Radio-JOVE web site: <http://radiojove.gsfc.nasa.gov>
- Radio-JOVE data Archive : <http://radiojove.org/cgi-bin/calendar/calendar.cgi>
- **RadioJOVE-VOParis project**
 - **Convert** RadioJOVE data (non-standard, or non VO) into CDF files, with VESPA and PDS compliant metadata.
 - Add a data **scientific validation** step.
 - **Distribute** RadioJOVE data to the scientific community using EPN-TAP through VESPA.
 - **Archive** data into NASA/PDS.

Low Frequency Radio Data

Stacked plot made with autoplots.org

Guess which is the RadioJOVE spectrogram ? ... :-)

Adding metadata

- Several metadata standards:
 - ISTP (International Solar Terrestrial Program):
required for archivable CDF
 - NASA/PDS (Planetary Data System):
required for archiving at PDS
 - VESPA (Virtual European Solar and Planetary Access)
required for distribution with EPN-TAP
 - RadioJOVE specific
- VESPA \Leftrightarrow EPN-TAP (= Planetary ObsCore), main keywords:
 - time_min, time_max
 - target(='Jupiter'),
 - spectral_range_min, spectral_range_max
 - measurement_type(='em.radio')

RadioJOVE Archive Architecture

RadioJOVE Archive Database

RadioJOVE and beyond

- RadioJOVE community is eager to see their data used in science papers
(D. Typinki, a “semi-pro” amateur, has read all papers on the subject :-)
- **Next step for RadioJOVE:**
 - upload raw data files and online conversion into CDF
 - NASA/PSD archive proposal
 - connexion with VWO (Virtual Waves Observatory), a US-based solar system radio VO, using the SPASE data model and registry.
- **Same type of infrastructure will be used to ground based low frequency radio observation the NASA JUNO mission** (arrival at Jupiter within 1 year). Datasets from: *Nançay Obs (France), Iitate Obs (Japan), Kharkov (Ukraine), LWA (New Mexico, USA), LOFAR (EU) & RadioJOVE*
- Working on interface for JUNO support teams at VOParis, with VESPA infrastructure. “Private data period (6 months)” to be set up.

Demo

RadioJOVE archive: list of observations

Browser window showing the website `voplus.obspm.fr`. The page header includes logos for Paris Data Centre, l'Observatoire de Paris, LESIA, and RADIO JOVE Files. The version is noted as "RJAP version 0.2 by RS" with a "Logout" button.

The main content area is titled "Add File" and contains the following form fields:

- Observation: 12
- Instrument (only required if you require to create an observation, ignored else): Meudon test radiojove setup
- Source (only required if you require to create an observation, ignored else): Sun
- Software: make_radiojove_cdf IDL routines
- Filetype: CDF
- Description: (empty text area)

Below the form, there is a "Choose the file upload" section with a "Choisir le fichier" button and a file named `radiojove_edr_sp2_300_201501190800_201501190909_v07.cdf`.

At the bottom right, there is a "SUBMIT" button and a small yellow icon.

At the bottom left, there is a link "Afficher un menu".

RadioJOVE archive: yet another upload, but under observation id=12
